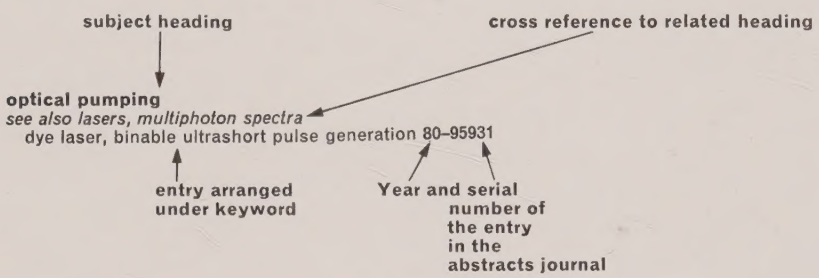
CUMULATIVE SUBJECT INDEX 1977-80

Coverage

The present index provides a subject key to all papers abstracted in *Physics Abstracts* for the years 1977–80. It therefore comprises all relevant entries included in the six monthly subject indexes for the same period.

Subject Headings

In the course of the four years covered by this index the list of subject headings has been revised and new headings have been added. The present index uses the latest (i.e. 1980) version of the list. Entries for articles abstracted in the 1977, 1978 and 1979 volumes have been examined and, where appropriate, re-indexed under the new headings.



Arrangement

The subject headings are arranged in alphabetical order. The entries under each are prepared so that the most significant or 'key' words appear first and thus determine the position and grouping of entries in the alphabetical sequence under each heading.

Where the names of specific inorganic substances are significant under a given heading, the entries relating to them are found as a second alphabetical listing arranged by the chemical formulae of the particular elements or compounds.

Form of entry

The information contained in the subject index may be illustrated by an example.

How to use the index

The Subject index provides an alphabetical subject key to the articles included in the abstracts journal. Some general guidance on its use is given below:

1. Look in the index for the name of the specific subject in which you are interested. In most cases this name will be a heading in the index and you will find relevant articles listed under it. The majority of the subject headings fall into the following categories: property, phenomena, substance or named objects, instrument, device, theory, method, process, application, event.
2. Occasionally you will be directed from the subject heading chosen to a different heading under which the relevant or additional articles are listed.
3. If you do not find the subject heading you first chose, try a more general heading.
4. Each entry under the heading relates to an article appearing in the abstracts journal and gives the serial number of that article in the journal preceded by the last two digits of the current year, e.g. 78–12345; i.e. Abstract number 12345 in the abstracts journal for 1978.

   The language of the article, if it is not in English, is also indicated, e.g. optical fibre, three-wave stimulated Raman scattering (French) 0–78902.

   Each entry starts with a Keyword or Keyphrase considered to be most relevant to the heading. On sorting these Keywords, the qualifying prefixes are usually ignored (e.g. n-Ge is sorted under Ge).

   There are three main keyword lists; arabic numerals, alphabetical A–Z, and chemical symbols (organic substances are written and not given as chemical formula). More than one Keyword list may be present under each subject heading.

   For document on, say 'photoemission of silicon' at least two access points 'photoemission' and 'elemental semiconductors' are provided. Under the heading 'photoemission' the Keyword will be 'Si' and under 'elemental semiconductors' the Keyword will also be 'Si'.

   In a case like this, it is advisable and quicker to use the heading 'photoemission' and go straight to the chemical symbol list for 'Si' because there are few entries listed under 'photoemission'.

Abbreviations and Acronyms

Abbreviations and acronyms are used in the modifiers in all INSPEC Cumulative Subject Indexes. Individual terms should be readily understood in the context of the subject headings. **Inorganic substances** are usually given by their chemical formulae. Iron and aluminium garnets appear in the formulae lists as MIG and MAG (where M is metal element, e.g. YIG and YAG); $(Pb,La)(Zr,Ti)O_3$ and $Ce_2Mg_3(NO_3)_{12}$ appear as PLZT and CMN respectively. **Organic substances** including **liquid crystals** are not given as formulae but common abbreviations are used.

Venera, surface bistatic radar survey 77−87304
Venera 10, Venus rock density meas. method and results 78−28564
Venera 11 and 12 first results *(Russian)* 79−35165
Venera 9 and 10, aerodynamics and dynamics during motion in Venus atmosphere 77−91399
Venera 9 and 10, descent vehicles and atmospheric parameters meas. 77−78597
Venera 9 and 10, flight control 77−78598
Venera 9 and 10, ion-flux charact. meas. in solar wind/Venus interaction region 78−4051
Venera 9 and 10, meas. of interplanetary background due to low-energy particles 78−4049
Venera 9 and 10, plasma meas. using wide-angle instruments, preliminary results 77−91396
Venera 9 and 10, preliminary results 77−78596
Venera 9 and 10, results of two-freq. radioscopy of Venus daytime ionosphere 78−4129
Venera 9 and 10, results of two-freq. radioscopy of Venus nighttime ionosphere 77−91454
Venera 9 and 10, TV surface expts. on Venus 77−78599
Venera 9 and 10 construction, instrumentation and preliminary results 77−41339
Venera 9 and 10 probes, successful Venus surface pictures *(Russian)* 77−25967
